This first part of the course Introduction to Aerospace Engineering presents an overall picture of the aeronautics domain. This overview involves a number of different perspectives on the aerospace domain, and shows some basic principles of the most important concepts for flight. Then the basic aerodynamics are covered, followed by flight mechanics.

Introduction to Aerospace Engineering I - TU Delft Ocw

This part of the course Introduction to Aerospace Engineering is focused on two aerospace disciplines: 'space and orbital mechanics' and 'structures and materials'. These topics are discussed in detail and will provide an understanding for both aircraft and for spacecraft/space missions.

Introduction to Aerospace Engineering | CosmoLearning ...

The author mentioned in the introduction that "Students should be aware that in the long end, decisions made within the field of aerospace structures and materials are often dictated by these soft (safety, manufacturability, availability, and cost) considerations rather than hardcore engineering (solid material physics, and structural analysis)"; This is not an accurate statement because engineering design in any field, not only aerospace industry, consider 'hard/soft' cores in the design ...
